New Concepts In Global Tectonics

No 23, June 2002 Editors: J.M. Dickson
and D.R. Choi

FROM THE EDITORS

NCGT is to have a symposium at the next International Geological Congress to be held in Florence, Italy in 2004. This symposium is to be organized by Professor Forese Wezel. Professor Wezel is considering a programme based on three states of stress of the crust: contraction, expansion and pulsation i.e. alternating expansion and contraction. There is much information available for such a programme but yet there is much current controversy. When considering on directions in the geological sciences this could stimulate even a heated debate but which could give some real account of where we are going in developing some underlying theory. What ideas do our readers have about this??

PLEASE NOTE - FINANCIAL SUPPORT

We are asking for financial support to the extent of US\$30.00 or more or the equivalent from individuals who are able and US\$50 or the equivalent for libraries. As only small sums of money are involved, in order to avoid bank charges which are not small, we ask you to make out bank drafts or personal cheques to....

CONTENTS IN THIS ISSUE

From the Editors.....	1
Articles	
From geosyncline to fold mountains.....	2
Deep-seated faults and deep earthquakes.....	7
Discussions	
Surge tectonics wobble.....	14
Pacific paleobiogeography and expansion.....	18
News.....	19
Publications.....	21
About the Newsletter.....	22
