Continental rocks in the Indian Ocean, <i>Takao YANO, Boris I. VASILIEV, Dong R. CHOI, Seiko MIYAGI, Alexander A. GAVRILOV and Hisao ADACHI</i>	9
The occurrence of continental rocks at 32 localities in the Indian Ocean is reviewed. Almost all of them were found in rises, plateaus, and ridges situated in the marginal ocean basins. To understand the ocean-floor processes, the thermal and compositional inhomogeneity and low fluidity of the mantle are important constraints.	
9/56 year cycle: Californian earthquakes, <i>David McMINN</i>	29
This paper examines the prospect of a 9/56 year cycle in the timing of major earthquakes in California - Nevada - Baja California. The 9/56 year seismic cycle was hypothesised to arise from tidal triggering by the Moon and Sun. Most significant are ecliptical positions of the Sun, lunar ascending node and apogee.
